

The future of electronic ticketing in the public transport of Switzerland

Stefan Aeschbacher, Systems Engineer BIBO, SBB

Results of the MkS and FAS working groups

Marcel Frikart, Frikart Engineering GmbH | Jesko Lamm, Bernafon AG

The two working groups, FAS and MkS, will present their most recent results. FAS is a method for describing functional architectures for systems. MkS strives to adapt the Systems Engineering discipline to moderately complex systems.

The main presentation will show how a new ticketing system will be used to simplify public transport in Switzerland. The system will detect the journeys without interaction of the customers and bill them accordingly.
